

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of enhancing a vaccine-induced immune response comprising administering to a mammal receiving said vaccine an amount of a polypeptide that ~~comprises~~ consists of a portion of K12 (SEQ ID NO:1) that includes at least the extracellular domain of K12 (SEQ ID NO:1), or portion of said extracellular domain that retains binding affinity for CD7, sufficient to enhance said immune response.
2. (Cancelled).
3. (Currently Amended) A method of enhancing a vaccine-induced immune response comprising administering to a mammal receiving said vaccine an amount of a polypeptide that ~~comprises~~ consists of a portion of K12 (SEQ ID NO:1), or a polypeptide at least 99% homologous to K12 (SEQ ID NO:1), that includes at least the extracellular domain of K12 (SEQ ID NO:1), or the extracellular domain of said polypeptide is at least 95% 99% homologous to the extracellular domain of human K12 (SEQ ID NO:1) that retains binding affinity for CD7, sufficient to enhance said immune response.
4. (Current Amended) The method according to claim 1 wherein said polypeptide is soluble human K12 (SEQ ID NO:1).
5. (Cancelled).

6. (Original) The method according to claim 1 wherein said mammal is a human.

7. (Currently Amended) The A method of enhancing a vaccine-induced immune response comprising administering to a mammal receiving said vaccine an amount of according to claim 1 wherein a nucleic acid that encodes a polypeptide that consists of a portion of K12 (SEQ ID NO:1) that includes at least the extracellular domain of K12 (SEQ ID NO:1), or portion of said extracellular domain that retains binding affinity for CD7 said polypeptide, wherein said nucleic acid is administered to said mammal under conditions such that said nucleic acid is expressed and said polypeptide is thereby produced.

8. (Original) The method according to claim 7 wherein said nucleic acid is present in a vector.

9. (Original) The method according to claim 7 wherein said nucleic acid is operably linked to a promoter.

10. (Withdrawn) A method of stimulating production of TNF- α , IL-2 and IFN- γ by TCR $\gamma\delta$ cells and NK cells comprising administering to a mammal receiving a vaccine an amount of a polypeptide that comprises the extracellular domain of K12, or portion of said extracellular domain that retains binding affinity for CD7, or mimetic thereof, sufficient to effect said stimulation.

11. (Withdrawn) The method according to claim 10 wherein mammal is a human.
12. (Withdrawn) The method according to claim 10 wherein said K12 is human K12.
13. (Withdrawn) The method according to claim 10 wherein a nucleic acid that encodes said polypeptide is administered to said mammal under conditions such that said nucleic acid is expressed and said polypeptide is thereby produced.
14. (Withdrawn) The method according to claim 13 wherein said nucleic acid is present in a vector.
15. (Withdrawn) The method according to claim 13 wherein said nucleic acid is operably linked to a promoter.
16. (Withdrawn) A composition comprising a polypeptide that comprises the extracellular domain of K12, or portion of said extracellular domain that retains binding affinity for CD7, or mimetic thereof, and an antigen.
17. (Withdrawn) The composition according to claim 16 wherein said polypeptide is conjugated to said antigen.
18. (Withdrawn) A composition comprising a nucleic acid sequence encoding a polypeptide that comprises the extracellular domain of K12, or portion of said extracellular

HAYNES, Barton F.
Appl. No. 10/730,379
December 20, 2006

domain that retains binding affinity for CD7, or peptidomimetic thereof, and a nucleic acid sequence encoding an antigen.

19. (Withdrawn) A nucleic acid sequence encoding a fusion protein wherein said fusion protein comprises: i) the extracellular domain of K12, or portion of said extracellular domain that retains binding affinity for CD7, or peptidomimetic thereof, and ii) an antigen.

20. (New) The method according to claim 1 wherein said polypeptide consists of the extracellular domain of K12 (SEQ ID NO:1).
